🎓 EDUCATION

Harbin Institute of Technology (Shenzhen), Shenzhen, China 2024 – Present

B.Eng. candidate in Computer Science and Technology, expected June 2028

National University of Singapore (NUS), Singapore Jun 2025

Summer Visiting Student in Computational Thinking

👥 PROJECT EXPERIENCE

Personal Website <https://mervinshi.cn/> 2025.04 – 2025.05

Independent Developer HTML5 / CSS3 / Vanilla JavaScript / GitHub Pages

- Built a 9-module static personal homepage from scratch with 3000+ lines of zero-framework code; implemented an interactive Hero animation using `<canvas>`, with five translucent orbs drifting under mouse/touch repulsion and bilingual taglines dynamically reflowing through the gaps.
- Developed a full Chinese-English i18n system (data-lang-* driven, localStorage persisted), along with comprehensive accessibility features (ARIA, keyboard navigation, prefers-reduced-motion); applied deep performance optimizations (lazy loading, DPR capping, font timeout fallback, slow-network degradation) and responsive design across 4 breakpoints.

Empathetic Companion LLM 2025.05 – 2025.12

Core Member React Frontend / Async Streaming Advisor: Prof. Daojing He

- Built an empathetic conversational SPA for adolescent emotional support using React 18 + React Router, independently completing the entire frontend including a chat-style interface and an emotion tracking dashboard.
- Managed large-model streaming connections via Axios, handling chunked data parsing and React state updates; achieved first-token latency $\leq 1.2s$ with reconnection and graceful degradation. Annotated 5000+ high-quality emotional utterances; model empathy accuracy improved by 23%, and the system has been piloted with 300+ users.

Multilingual Narrative Generation Engine 2024.10 – 2025.10

Project Lead Prompt Engineering / LLM Applications Advisor: Prof. Kehai Chen

- Built a trilingual (Chinese, English, Japanese) story generation engine based on Qwen2.5 and similar models; designed multi-layered prompt templates (role setting, plot constraints, cultural injection) and conducted CoT and Few-shot strategy comparisons, boosting factual consistency by 30%.
- Combined lightweight post-processing rules to achieve a usable text rate of 89%; the project received an Excellent rating.

⚙️ TECHNICAL SKILLS

- **Languages & Frameworks:** Python (PyTorch, Scikit-learn), JavaScript/HTML5/CSS3, React, WeChat Mini Programs; familiar with Java, C
- **Tools & Platforms:** Git, Linux, Axios/streaming, GitHub Pages / Vercel deployment, Canvas animation

💖 AWARDS

Bronze Award, China International College Students' Innovation Competition Jun 2025

Second-class Scholarship, Harbin Institute of Technology Oct 2025

Bronze Award, "Challenge Cup" National Business Plan Competition Mar 2026

👤 PERSONAL STRENGTHS

- Strong communication and teamwork: served as project lead or core member multiple times, adept at cross-role collaboration.

- Resilient and diligent: maintained high GPA while delivering quality results across several parallel projects.
- Solid quantitative foundation (full-mark Probability, 99/100 Calculus), skilled at mathematical modeling and algorithmic problem decomposition.
- Fast learner: quickly adopted React and Mini Program development and applied them to real-world projects independently.

i ADDITIONAL INFORMATION

- GPA: 89/100 Rank: 84/609 (top 13.8%)
- GitHub: <https://github.com/MervinShi>
- English: CET-4 644, CET-6 543; capable of unhindered oral communication
